DOI: 10.1103/PhysRevLett.125.029902

We found an error in the caption of Fig. 1(d). The corrected description is "(d) Individual dI/dV spectrum taken at the center of the David star away from surface impurities. U = +500 mV and  $I_t = 100$  pA".

This does not affect the result of the paper. In fact, all the analyses in the text were based on this correct description and we forgot to correct this error in the figure caption during the manuscript preparation.
